

My name is
Vampyrum spectrum

What kind of Blood-thirsty
Maya Bat am I?

Storyboard Dr Nicholas Hellmuth
Illustrations Melanny Quiñonez

Three species of traditional ("true") vampire bats live in the Aztec, Zapotec, and Mayan areas of Mexico, Guatemala, Belize, and Honduras.

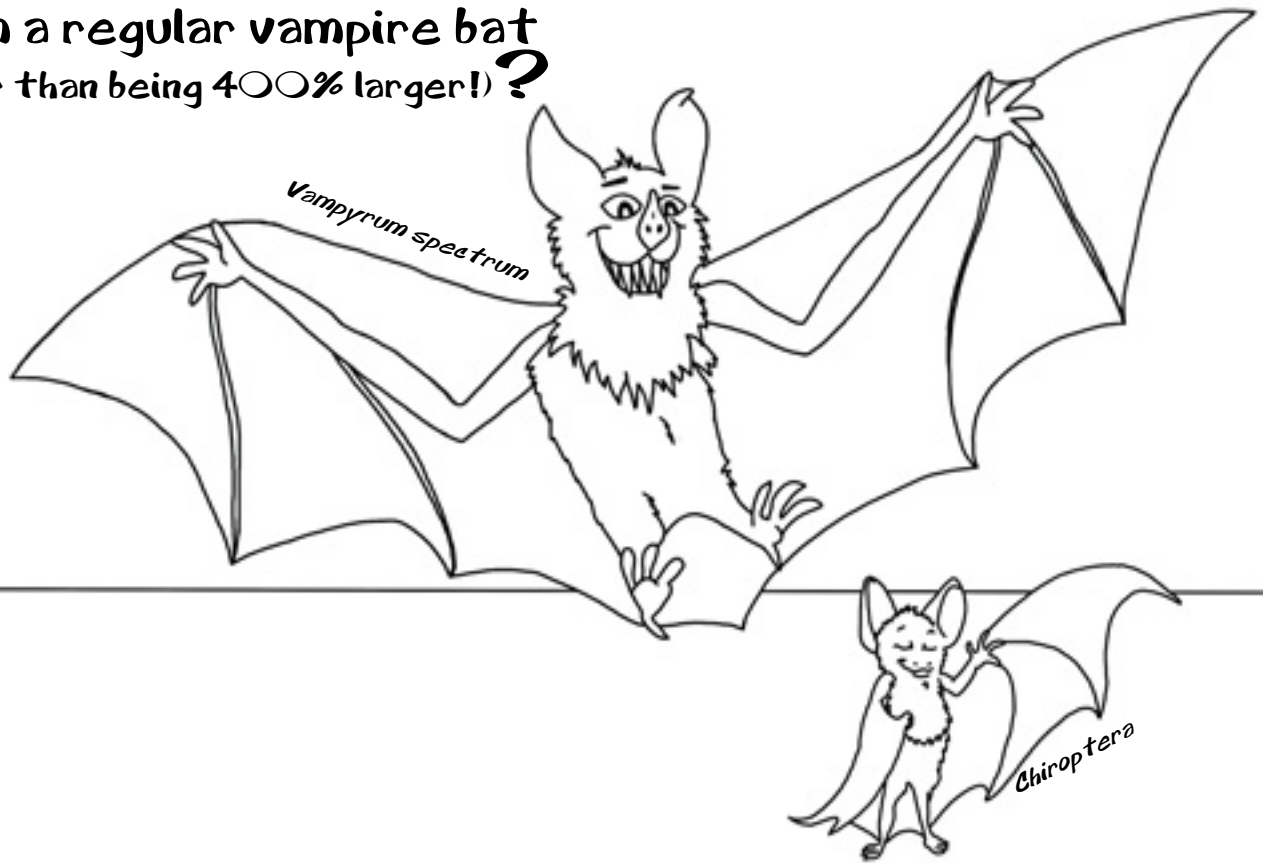

We will have a separate adventure story of these true vampire bats.

Look how well I take care of my family.

I even put my wings around my wife and children while we sleep.

How do I differ
from a regular vampire bat
(other than being 400% larger!)?

Here is my family:

Lovely Mother Bat

(I like her as a friend for life).

Here are my kids (my bat pups).

I am definitely
not as bad
as a true vampire.
