

# HOW TO MAKE RUBBER BOUNCE

Storyboard Dr. Nicholas Hellmuth Illustrations Vivian Diaz

Victor and Maya wondered how  
the rubber ball, the sandals, and the  
little figurines were made  
and where does this  
bouncing material come from

1

So first of all, we have to  
find the correct material to  
combine with rubber  
sap and make it bounce

4

Toucanny extracts latex  
from the papaya tree

This vine its named *Ipomoea alba*, and its juice is the magical ingredi-  
ent that make the rubber go elastic and bounce

Dont miss this great story about ancient  
Mesoamerica technologies and adventures!  
You will understand how the rubber process  
was thousands of years before
